6350 THEORY OF OPERATION

The 6350 is designed to monitor up to four 3101 or 3101B Delayed Egress Systems. The 6350 is mounted on a standard 2 gang plate and includes four bi-color LEDS, an audible and a mute switch. The 6350 allows the ability to visually and audibly monitor the 3101’s from a remote location.

Note: Use of the 6350 requires each 3101 or 3101B being monitored to have the Dynastat Option (Bond Sensor).

GENERAL MOUNTING INFORMATION

1. Disassemble the 6350 by removing the four anti-tamper screws securing the cover plate to the back plate. Disassemble the panel assembly, mount the double gang box in the desired location with the desired knock-outs removed.

2. Bring the signal and power wires into the box leaving enough slack to attach the ends to the 3. Connect the signal and power wires referring to the wiring diagrams on the following pages.

4. Mount the panel to the box with the four #6-1" screws, then replace the cover plate with the four #6-1/4" anti-tamper screws removed in step one.
**BOX CONTENTS**

- 1 - PLUG-IN TRANSFORMER P/N 5312
- 1 - 6350 MONITOR ASSEMBLY P/N 600222
- 1 - HARDWARE PACKAGE P/N 600221
- 1 - INSTALLATION MANUAL

**SPECIFICATIONS**

**SUPPLIED 12 VAC TRANSFORMER:**
- **INPUT POWER** - 120VAC 60HZ .33AMP
- **OUTPUT POWER** - 12VAC 40VA

**6350 PC BOARD INPUT:**
- 12VAC OR 12 VDC, .42mA

**MAINTENANCE**

The 6350 may be periodically cleaned with a mild detergent and a clean soft cloth. To avoid damage do not use any abrasives or cleaners.

**FUNCTION CHART**

<tr>
<td>DURING FIRE ALARM</td>
<td>RED</td>
<td>ON</td>
</tr>
</tbody>
</table>

1. The mute switch silences the current alarm only. The next alarm to occur will sound the audible again.

2. If no audible is desired during a legal bypass disconnect the 1N4003 diode between terminals 20 & 23 on the 3101 or terminals 15 & 18 on the 3101B. The corresponding LED will be in an off state during a legal bypass when the diode is removed.

1N4003 DIODE SHOWING CATHODE SIDE Figure (A). DIODE SHOWING CATHODE SIDE IN WIRING DIAGRAM FIGURE (B). See wiring diagrams A through D for addition of diodes.
TYPICAL WIRING - 3101B SERIES LOCK(S) ONLY

NOTES:
1. J2 thru J4 on the 6350 are for monitoring additional 3101 units.
2. Terminals 13 thru 15 on the 3101 are for Delayed Egress Monitoring.
3. Terminals 16 thru 18 are for Dynastat Monitoring (Bond Sensor).
4. If no Audible or LED is desired during a legal bypass disconnect the 1N4003 diode between terminals 15 & 18.

WIRING FOR TWO 3101B’S TO ONE STATION

NOTES: 1. Same rules apply to two doors on one station as they do above to one door on a single station.
